

## LOGIXML INTRODUCES 64-BIT SUPPORT FOR LOGI INFO

### LogiXML's Managed Reporting Solution, Logi Info, Offers 64-bit Support for Greater Flexibility, Scalability

**McLean, VA (August 25, 2008)** - LogiXML, Inc., the fast-growing provider of interactive, Web-based Business Intelligence (BI) solutions, announced today that it has introduced 64-bit support for its managed reporting software, Logi Info.

"As data volumes continue to grow and gain in complexity, we're responding to our clients' demand for increased hardware performance, capacity and scalability," said David Abramson, Product Manager at LogiXML. "With 64-bit operating systems and database platforms, our customers and partners can keep meeting the high performance requirements of their users."

Thanks to 64-bit support, flexibility is much greater in terms of deployment strategies, while more concurrent users can be reached without placing undue strain on the system.

"We're allowing you to deploy your reporting, analysis and dashboard applications to whichever server hardware model you choose (that is, 32 or 64 bit)," continues Abramson.

The full 64-bit Logi 9 platform including ad hoc reporting, analysis, dashboarding and data integration software will be announced in the near future.
